Dear Gildan Customer,

As the largest brand selling products into the Imprinted Sportswear and Promotional Products channel we are especially proud to hear from printers at trade shows and events that our products are their 1st choice for printing. We engineer every fabric and trim to achieve the best and most uniform print surface possible. In the past couple of months we have started transitioning some of our products into Tearaway labels to be able to provide with an option to all of those customers that want to relabel.

It is highly recommended to use the following settings when printing on any product that features a Tearaway label:

Curing Temperature	Curing Time
315 - 350° F	3 - 4 seconds

We do take every claim/complaint about quality very seriously. It is only through listening to what decorators and end users are telling us that we can continuously improve our products. If you have any comments or quality issues please send us an email to product@gildan.com.

Thanks for your continued support

Jeffrey J. Cooper
